

OBJECT OF THE MONTH

OFFICE BUILDING, BELGIUM

The Recomed company finds enough space in this completely renovated country house villa in Belgium. While the villa retains its authentic charm, the top priority is maximum energy efficiency with maximum user comfort and particularly low operating costs.

Since 2021, the renovated office building has been shining with sustainable, super-efficient building technology and an excellent indoor climate. Two PHI-certified LG 450 compact ventilation units were used, which were mounted on the wall in the building services room.

The more powerful fans extend the range of use to up to 450 m³/h, making the LG 450 an all-rounder for small offices and business premises.

With state-of-the-art fan technology, new standards are set with low noise emissions, aerodynamic optimization, economical operation and integrated volume flow control. In addition to the proven touch display, operation is also possible via the Pichler app.
